EDUCATION

Northeastern University

Boston, MA | May 2023

Master of Science in Engineering Management (Data Platforms)

Vellore Institute of Technology

Vellore, India | Apr 2020

Bachelor of Technology in Mechanical Engineering (Automotive)

PROFESSIONAL EXPERIENCE

Software Engineer, CloudBig Technology

Seattle, WA | Jun 2024 - Mar 2026

- Architected high-throughput event-driven pipelines processing 90M+ records per month using SNS, SQS, and OpenSearch, reducing query latency by ~40% and improving throughput under peak production load
- Led zero-downtime migration of a large-scale monitoring and notification platform (3500+ workflows) to AWS-native architecture, redesigning scheduling and execution using EventBridge and Lambda, improving alert accuracy by ~35% and system reliability
- Engineered fault-tolerant asynchronous processing systems using DLQs, retries, visibility timeouts, and idempotent consumers, achieving 99.9%+ processing success and reducing duplicate processing failures by ~90%
- Designed end-to-end CI/CD pipelines with automated integration, load, and canary testing (Hydra), enabling safe production deployments through automated validation and rollback mechanisms
- Built LLM-driven autonomous remediation agents to analyze production failures and execute runbook actions, reducing on-call effort by ~20% and decreasing MTTR by ~50% across distributed systems
- Drove architectural decisions across compute and scheduling layers, evaluating compute and orchestration tradeoffs (Lambda vs Fargate) and scheduling strategies to reduce infrastructure cost by ~25% while improving latency and scalability

Software Engineer, Mystry Inc.

Seattle, WA | Oct 2023 - Jun 2024

- Owned the migration of on-premises data systems to Azure Cloud, redesigning storage layouts and query patterns to improve analytical performance by 35% while reducing infrastructure costs by 25%
- Orchestrated Azure-based ETL pipelines processing 2TB+ daily, implementing CI/CD-driven data workflows that increased deployment throughput by 40% and reduced downtime by 30%
- Developed Python-based data marts and clustering models to support customer segmentation and downstream analytics, increasing marketing engagement by 15% through improved data accessibility

BI Engineer, Highbar Technologies

Mumbai, India | May 2020 - Jun 2021

- Enabled an 11% revenue uplift by designing KPI-driven Tableau dashboards and optimizing SAP HANA queries to deliver near-real-time insights across finance and operations teams
- Improved credit and operational risk modeling accuracy by 20% by building Python and Excel-based variance analysis and stress testing tools used in investment planning workflows
- Automated financial ETL pipelines using Azure Data Factory, automating reporting workflows to significantly reduce data refresh latency and manual intervention

TECHNICAL SKILLS

Programming Languages: Python, SQL, JavaScript, TypeScript, R, Go, Transact-SQL, HTML/CSS

Data & ML Libraries: NumPy, Pandas, PySpark, TensorFlow, Scikit-learn, Matplotlib, Seaborn

Data Platforms & Distributed Systems: PostgreSQL, MySQL, DynamoDB, Aurora, OpenSearch, Kafka, Spark, Hive, Airflow

Frameworks & Tools: React, Node.js, Angular, Tableau, Databricks, Snowflake, Git

AWS: Lambda, ECS Fargate, Step Functions, CloudFormation, CDK, S3, SQS, EventBridge, API Gateway, SES, KMS, CloudWatch, RDS, EC2

RECENT PROJECTS

SyzManiac – Developer Environment Automation CLI Platform (Go, Shell, GitHub)

May 2023 - Dec 2024

- Designed and built a Go-based automation framework to deterministically provision and restore an entire macOS development environment, including dependency installs, versioned dotfile migration, and lifecycle orchestration via a custom syz CLI
- Implemented idempotent workflows, fast system state scanning, structured logging, and healthchecks to enable one-command bootstrap and recovery, treating a developer workstation as a reproducible, self-healing system
